

Introduction

The availability of new technologies in the field of radio reporting and broadcasting necessitates an increased need for acquiring new skills, especially the ones which involve digitalisation. This unit particularly focuses on exercises and materials useful in conducting training sessions for trainers who are unfamiliar with digital processing of radio materials. In particular, the unit concentrates on the availability and use of digital recording equipment, editing, publishing and broadcasting, as well as storing and dissemination of digitally produced radio materials. The unit provides four Power Point presentations for choice. The general idea is that trainers should have some flexibility on what they feel is appropriate in a given situation. The materials generated for this unit put a considerable stress on teaching trainers how to teach practical skills with regard to digitalisation. In order to achieve this goal a hands-on approach is applied.

Depending on what they feel is appropriate in a given situation trainers can integrate parts of Unit 2 within Unit 1 and vice versa.
