The Lecture Series "Autism Studies in Education" aims to create a space for discussion and exchange on critical approaches in the context of autism or neurodiversity and related practices in educational institutions. Following Davidson and Orsini (2013: 13) in their understanding, we see (critical) autism studies as a way to advance "new, enabling narratives of autism that challenge the predominant (deficit-focused and degrading) constructions that influence public opinion, policy, and popular culture".
